

ok ive added u to the project instead i think u shud be able to acces thbe chats and sources correct ?

Thought for 15s >

Yes, partly.

I can access the project context that has been loaded into this chat, including the recent project conversation excerpts and the uploaded source files I can see here, such as:

End Of Source Conversation.pdf

NRG Agent OS Source Intake Prompt.pdf

JARVIS-Prompt-Pack.pdf

Pasted text(60).txt

mash-of-conversations-overlapping-problem-more-than-likely-the-case.txt

I can also see the project conversation history snippets shown in this chat, including the "Hello, Hello, Hello" and "NRG Agent OS discussion".

What I cannot honestly guarantee is full access to every chat you have ever had unless it is the

included in the project context.

Uploaded as a file

shown here:

or supplied by the project system into this conversation.

So the clear answer is:

Yes, I can access the chats and sources that are attached/visible in this project context. I should still treat the uploaded files as the real source pack and not assume missing chat excerpts unless I can actually see them.

Alright, will not send the final distillation until you give the clear command: DONE WITH COPY.

i made sure the things i think are relevant are in this project so if can access at the very least 100% of the information in sources we are good to say done copy if not let me know now

≡  concept designs

  ...

Yes we're good to click DONE WITH COPY

I wanted to access the main source material that is surfaced in this project the open consolidated conversation online for the NRG Agent OS intake for JARVIS and the Jarvis prompt pack. The intake prompt PDF contains about 500 words plus 100% of what the OS workers and a couple hundred text cards. The OS workers include the integrated Smithsonian National persistent memory. I don't know what the OS is but the talk started rather than old board Hermes JARVIS agent.

 NRG Agent OS Source Intake Prom...

I can also accept the large messy source file that contains the failed prompt attempts with made corrections. File ready packed into PDF and the OS workers and the OS workers that we can copy JARVIS build kernel that we can use.

 mash-of-conversations-overlappi...

The JARVIS PDF is accessible too, including its included source code that we can remember that captures and JARVIS and its material and can treat it as inspiration only rather than a direct copy.

 JARVIS-Prompt-Pack

Only hopes reveal I could provide access to multiple projects instead the system is not unified. But for the sources you made relevant and placed into this project I have enough access to proceed.

Thought for 7s >

RECURRING RULES: WAITING FOR DONE WITH COPY

?

Thought for 6s >

I'm holding because you told me not to start until you give the clear command **DONE WITH COPY**

I received the extra uploaded files. I have not started distilling or writing the final table prompt yet.

When the source dump is finished, send:

DONE WITH COPY

Then I'll process the full source set and produce the one finished master prompt only.
